20 Apollo XP95 Addressable Bases
16 Apollo XP95 Addressable Sounder Beacon bases
18 Apollo XP95 Addressable Sounder bases
4 Apollo XP95 Addressable Input Output Units
1 Zone Chart

Supply, Installation and commissioning Enhanced Cable & Fixings as necessary.

INSTALLATIONS

The entire installation will be carried out using 1.5mm and/or 2.5mm 2 core FP200 Gold, which is designed for the prolonged operation when subject to fire, and complying with BS 5839 fire alarm BS 4066 test under fire BS 6387 CAT CWZ and IEC 331 fire resistant. Where possible cables will be concealed within the building fabric. However, where our engineers deem this impractical, cable will be surface run or on Tray. During this installation, we do not anticipate that any building works will be required. However should our engineers identify any areas of concern we will advise you before proceeding and agree a suitable solution, buildings' works would generally be limited to chasing of walls, structural penetrations exceeding 35mm, making good, and redecoration where necessary The installation will be in compliance with the IEE regulation 18th Edition.

SYSTEM DESIGN

The system proposed complies with British Standard 5839 Part 1:2017 Code of Practice for Installation and Service of Fire Alarm Systems in Buildings The above equipment is guaranteed against the employment of defective materials and or poor workmanship for a period of twelve months from the date of installation. This is exclusive of any maintenance that may be required during this period. Under the Control of Asbestos at Work Regulations 2002, anyone who owns, occupies or manages a property which is non-domestic has a duty to ensure that the risks from exposure to asbestos is managed (Reg4) and that exposure to employee and those not employed to asbestos is prevented. It is therefore essential that the responsible parties document the location of any asbestos containing materials within the premises, and produce an "Asbestos Management Plan" which will record the levels, type and condition of the materials. This can be done by means of a labelled drawing accompanied by arrangements and procedures for ensuring that any contractors engaged to work within the areas identified as being high risk are given suitable information as to prevent exposure. When preparing our quotation, we have assumed there to be no asbestos within the areas affected by our works. Should this not be the case we would ask you to forward details of the location of any asbestos containing materials with your order to enable us to review the controls in place prior to commencement of the works on site.

To supply, install, test and commission the above fire equipment to the specifications detailed herein:

Total ex VAT £24625.70

VAT @ 20 % £4925.14
Total inc VAT £29550.84

Good afternoon Claire,

I have spoken with Miss Woods, Headteacher, and she would like to proceed with the replacement of the required extinguishers below.

Please could you let me know when you would be able to deliver these and remove the old units?

Kind regards,
Daniel
